Wow, OK. This makes me hesitant to commit any substantial amount of funding towards this effort. Of course, I'll wait to hear your thoughts on this David. I'm thinking to allocate \$200K to START as seed money and then, whatever funding OW throws at this, we can make up with whatever HQ allocates. I'll use the remaining \$800K of the previously planned \$1m to put into ERRS for Minesite stabilization. Let me know if you other thoughts David. Thank you Steve, lw

Laura,

This discussion appears relevant to how much of the \$1.4M in FY14 funding we obligate and or how we approach the monitoring plan joint funding piece. I will call in a few so you can ponder the message below.

Do we have the people, authority, and funds to proceed? It appears so, based on discussions with the R8 removal program.

Is there broad agency support for moving quickly? Not so sure now.

Bert Garcia

Director, Ecosystems Protection Program

Importance: High

Are these funding uncertainties limiting your ability to prepare for upper animas sampling ASAP?

Hi folks, see below, to add to our comments to address. FYI, we are also working with OW to contribute some funds at the AA level, thanks all.

I have very grave concerns about the prospect of both limiting the "Long Term" Monitoring plan to one year without any response to comments and a thoroughly vetted scientific discussion of the merits. Doing so is not consistent with past Agency decisions in either SF or Water. I am not advocating for a specific timeframe, but the consideration of a timeline beyond one year should be discussed. Additionally, the prospect of using only CERCLA funds for this work need to be thought through, given a number of potentially less than desirable consequences that might occur. Specifically, will this decision impact the decision to list the site on the NPL, and subsequently establish site boundaries that extend into NM and beyond; also the decision on ending sampling could be greatly complicated by

the CERCLA process should any reoccurrence of metals or other constituents occur as a result of rain events or other causes (not related to the Aug event). Finally, consideration of programmatic and funding flexibilities should be discussed before we advance any recommendation to the Administrator.

I available to discuss if necessary.
